DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept.

In accordance with 37 CFR 1.142, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claim(s) 1-3, drawn to a compound (peptide), classified in class 530, subclass 324.
- II. Claim(s) 4, drawn to a method for measuring the vivo effects of the protein assembly, classified in class 435, subclass 7.1.
- III. Claim(s) 5-6, drawn to a method of protecting, and/or treating/preventing brain diseases, classified in class 514, subclass 12.
- IV. Claim(s) 7, drawn to a method of detecting a protein using 6E10 antibody, classified in class 435, subclass 331.
- V. Claim(s) 8 and 10, drawn to a method of detecting a protein using B103 neuroblastoma cells, classified in 435, subclass 344.
- VI. Claim(s) 9, drawn to a method of detecting a protein using brain slice cultures, classified in class 424, subclass 347.
- VII. Claim(s) 23-34, 36, and 38, drawn to a method of identifying compounds that block receptor binding of protein assembly, classified in class 435, subclass 334.

Art Unit: 1654

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-VII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product, as evidenced the different methods of use all using the protein assembly of Group I. Therefore, the inventions are patentably distinct.

The methods of Groups II-VII are directed to different inventions, which are not connected in design, operation, and/or effect. These methods are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.

The several inventions (Groups I-VI) above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference, which would anticipate the invention of one group, would not necessarily anticipate or even make obvious another group. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application. Restriction for examination purposes is therefore proper.

Art Unit: 1654

Because these inventions are distinct for the reasons given above and the search required for each group is not necessarily required for the other groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
